Contents:

I. History

II. Challenges

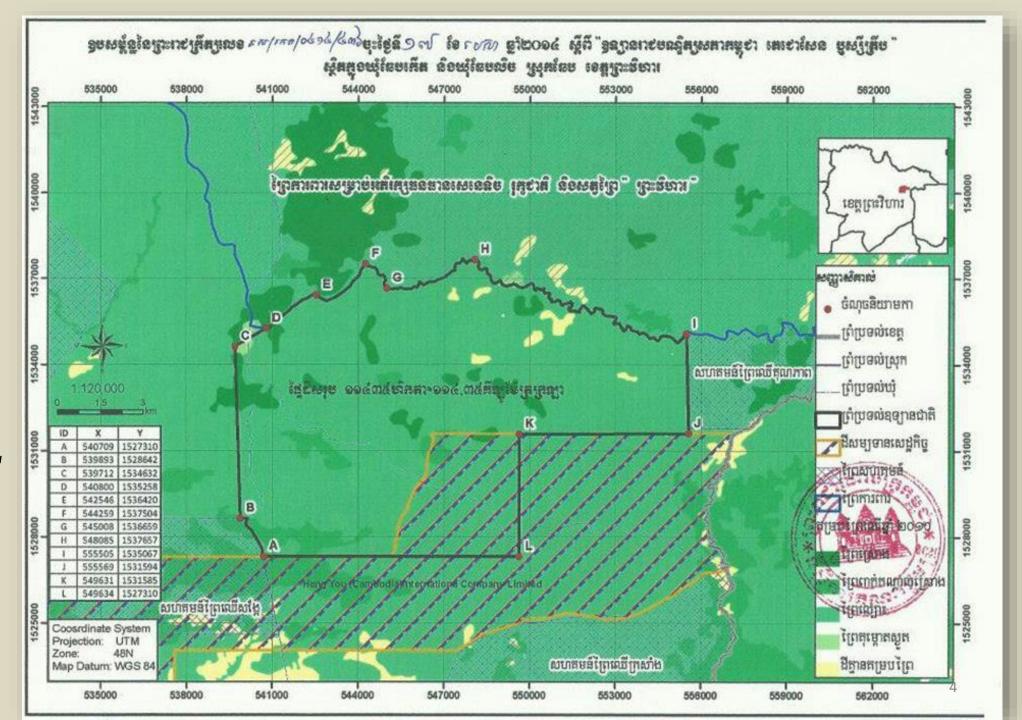

III. Potentials and Opportunities

I. History

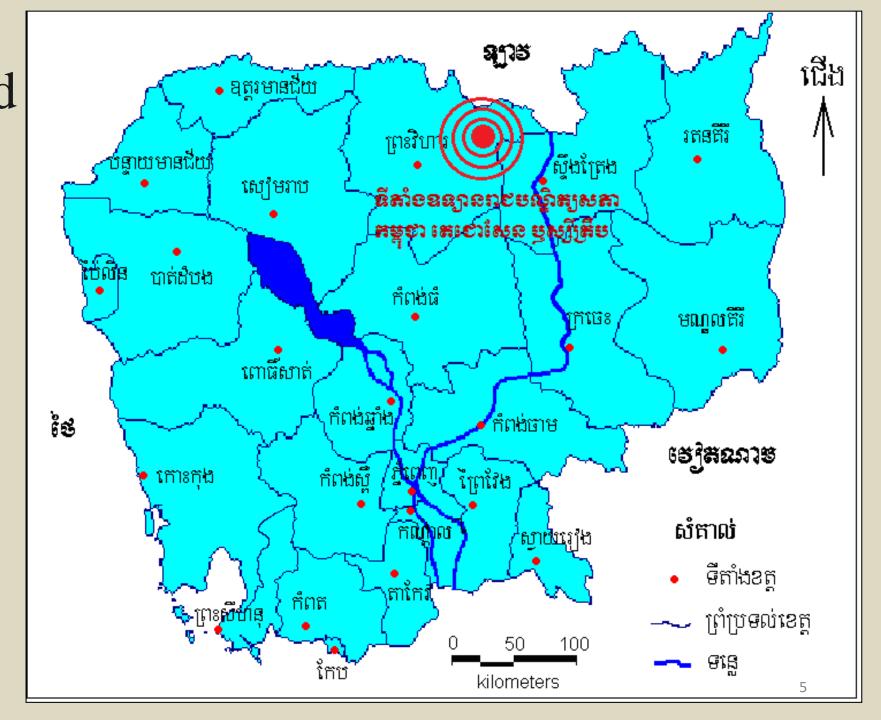

- Establishment: By the Royal Decree N 0414/436 on 8th April 2014
- Geographical location: Chhaeb Pir communes, Chhaeb district, Preah Vihear province
- Full of Natural and Cultural Properties

28-Oct-2019

Land size:
114.35
square
kilometers

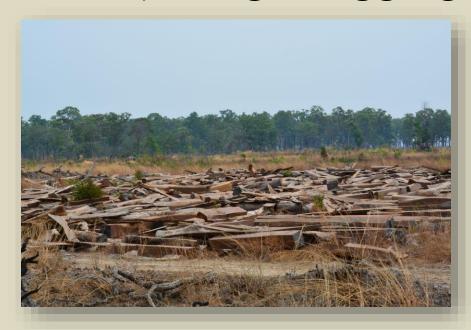

- The park located in Preah Vihear province (60km from provincial town)
- 320Km from Phnom Penh

II. Challenges

• Nature: Decrease of wild lives species(food, water, shelter...), illegal logging and poaching, climate change.

Woods logged by Chinese company
(Almost 1000 ha. cleared and more than 500 ha.
With Sugar cane planted by Chinese company)

RAC taskforce checked the illegal logging scene in the park

Socio-Economy: Private Sugarcane company infects the Park, Land clearance, illegal logging and poaching, illegal ambush, bushfires

Land clearance and encroachment by people in the park

RAC taskforce checked the cleared land in the park

28-Oct-2019

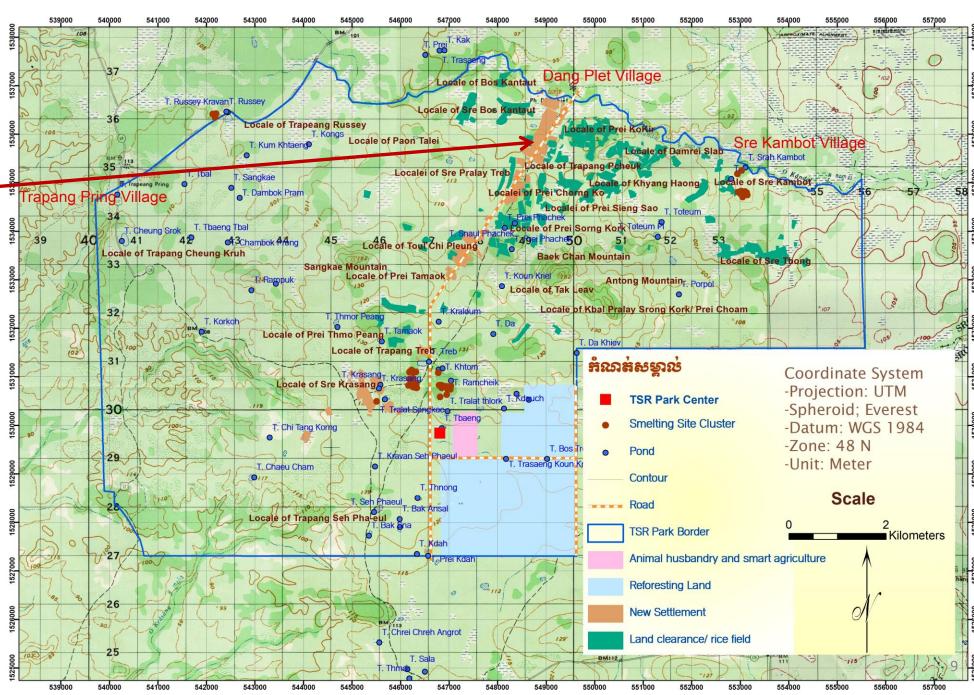

House built in the park area (30 families in 2016 increased to 88 families in 2017 on land size approx. 250-300 ha.

Bushfires

Map: new settlement

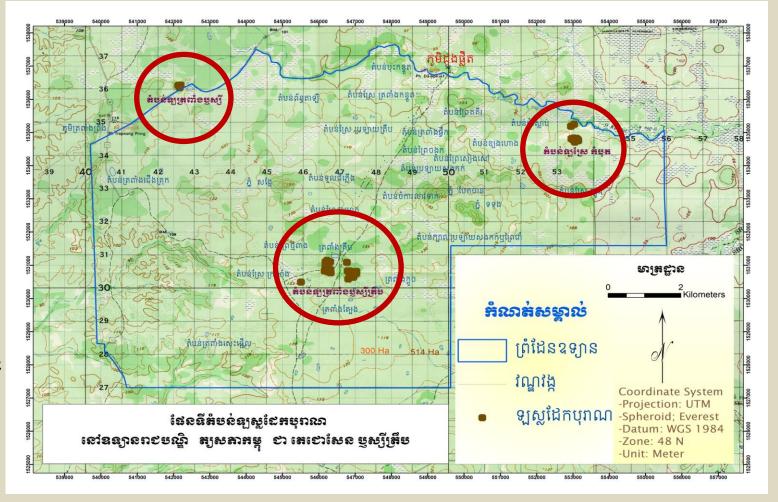

Cultural Properties

Map of smelting site clusters
(Trapang Treb and Trapang Russey Treb)

- 43 smelting sites
- 17 smelting site ponds
- 64 ponds

Losing historical data of iron smelting process and history of *Kouy indigenous ethnic minority* by invading from China Company

Air tube for iron forge, smelting furnace and iron slag.

Mounds of smelting furnace and iron slag.

III. Opportunities

1. Conservation Activities

Post demarcation of the park boundary: Since its establishment, the park's team surveyed to identify the park's boundary. Ultimately the park's team finished the boundary post demarcation in mid-2016.

Post and boundary demarcation in 2017

Research on the park's potentials: The park has cooperated with other institutions in RAC
 and others related stakeholders for park potentials researches, research on Tangible and intangible heritages, photomapping, bird species photograph, and Khmer Ancient Medicine.

• Regeneration, cultural operation: done some research on culture of Kouy ethnic minority, Kouy Martial art of Shield-fighting.

 Control on non-timber products of the park: The main traditional job of the neighboring community resin extraction, vine and mushroom collecting.

Resin collected from the forest was packed in the bottles for sale

Burning resin tree (way of extracting resin from the tree)

Protect of forest, land and ecosystem: created rangers equipped with patrol facility, cooperate with forest administration and local authority. Over 100 species of birds are recorded.

• **Forest nursery and replantation:** In late 2017, the park started tree nursing and replanting project which plans to regrow 1 million trees in 6 years aiming to rebuild forest cover and contributing to reduce global warming.

• Raise awareness of neighboring community: Community education is our first phase in conservation projects. The park's team cooperated with commune authority, forest administration, environment officers, and district authority to conduct workshops.

Tree plantation ceremony attended by Prime Minister Hun Sen on 18th May 2018

Wildlife recue and raising: Despite the conservation project in the forest, the park has project for wildlife recues and raising, wild pigs, wild deer, peacocks, and rabbits.

Water Basins building: Six ponds were dug inside the park to get water for wildlife during dry season. Every year, because of draught wild animals do not have enough water to drink, they seek water in the village and are killed by villagers.

• Iron smelting site excavation and site museum: This project provide the main support for nationalism, and encourage to have national pride for local people and nation, enhance and continue eternity for national cultural identity, technology, and tradition in particular and for the whole world in general.

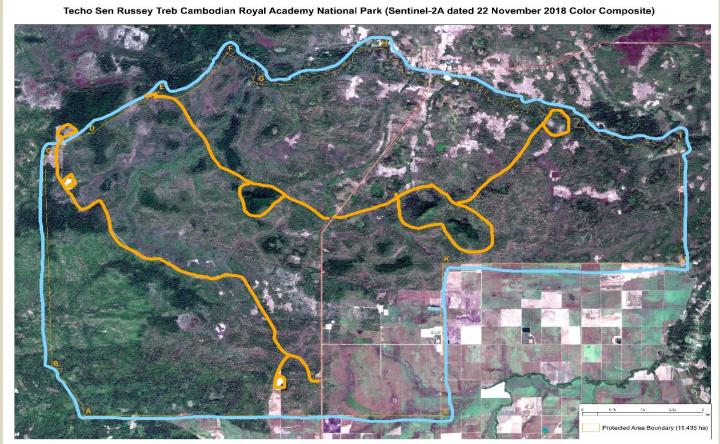

Iron Smelting furnace excavation activities in September, 2019

Iron Smelting Furnace Structure

2. Development Activities

Construction and maintenance of forest road: The park team and engineering force of Prime
 Minister conducted survey to build ring road and circuit roads around the park boundary and main
 roads inside the park for tourists and patrol.

Construction of posts, park center, infrastructure: Since 2017 the park team has built park center buildings, posts, and roads for staff office and dormitory. This also provides easy space for visitors, tourists, researchers, and students who come to experience the forest, camping, and culture study.

Infrastructure: building and roads...

Tourism promotion: The park has created atmosphere for tourist to experience iron smelting sites,
 tourism destinations, and ecotourism by providing information, site seeing, camping, forest trekking etc.

University students camping and replanting trees.

• **Dairy cow project:** Since May 2019, the park has started Dairy Cow project with 100 dairy cows in order to promote the production of dairy cows to enhance the economic efficiency of cow raising production in Cambodia via a proper breeding method.

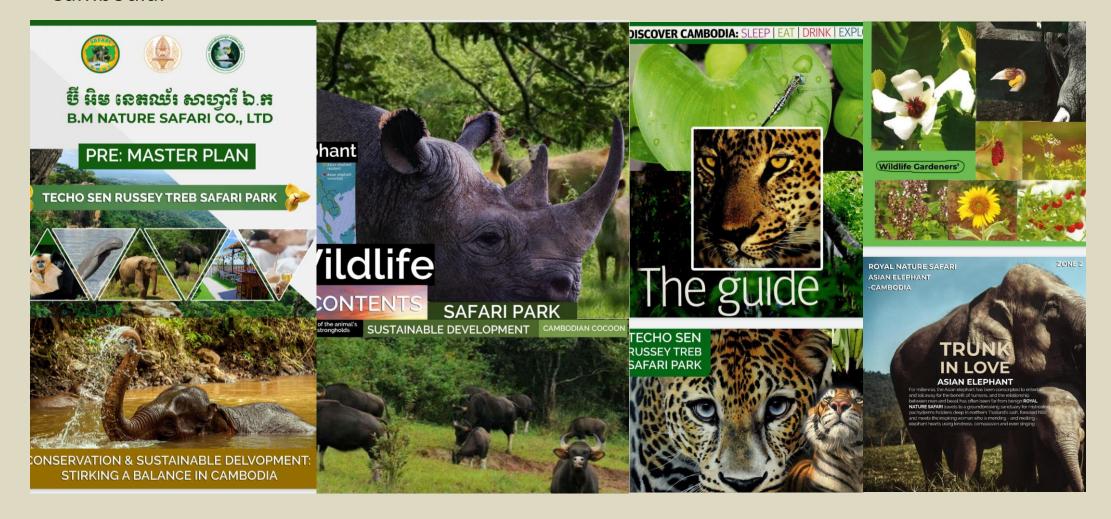

Dairy cow farm house, grass fields and fresh milk products

• Safari development project: In mid-2018 the park has cooperated with B.M Nature Safari to create Safari in the park. This project aims to promote wildlife conservation and tourist sector in Cambodia.

• Master Plan: In July 2018, the park cooperated with KEI (Korean Environment Institute) to conduct workshops on Master Plan development in the park.

Workshops on Master Plan conducted with KEI

28-Oct-2019 29 1st Workshop on "Preliminary Study to Develop Master Plan" at Green Palace Hotel with 29 attendees from 2-5

July, 2018.

2nd Workshop on "Develop Master Plan of Russey Treb Park" will be held between 25th and 29th November 2019 at Daejeon, South Korea.

Conclusion
